JP 1096106	A		8		

Abstract:

JP 1096106 A

A new external skin agent contains one or more flavone glycosides of formula (I) and/or isoflavone glycosides of formula (II); where e.g. R1 = H, OH, or OCH3; R2 = H, OH, or OCH3, R3 = H, OH, or OCH3, R4 = Glucose; R5 = OH, or OCH3; R6 = OH or OCH3) R7 = R8 OCH2O; R9 = H or OH; R10 = H or OH,; R11 = O-Glucose or O-Glucose-Glucose; and R12 = H.

The glycosides may be natural or synthetic. The natural glycosides are extracted, e.g., from Iridaceae plants, such as Iris florentina L., with one solvent of ethyl acetate, butyl acetate, amyl acetate, acetone, methyl ethyl ketone, acetyl acetone, methanol, ethanol, butanol, water, and their mixts. To remove hydrophobic ingredients, the extract may be subjected in advance to extn. with a nonpolar solvent e.g. hexane. Further purificn. is done, e.g., by silica-gel column chromatography with a mixed solvent of chloroform, methanol, and water, followed by reversed phase chromatography with C18. The blend ratio of the glycoside(s) based on the dry form is 0.000001-5 wt.%, pref. 0.00005-1 wt.%.

USE/ADVANTAGE - The agent is effective for curing wounds, preventing and curing rough skin, and preventing ageing e.g. wrinkles and loss of glossiness.

International Class (IPC Edition 4):

- A61K-007/00

JAPIO Class:

- 14.4 (ORGANIC CHEMISTRY--- Medicine)

Abstract:

PURPOSE: To obtain an external drug for skin having excellent antiaging effect to prevent the sagging of skin and loss of luster as well as wound-healing effect and preventive and improving effect to chapped skin, by compounding flavone glucoside and/or isoflavone glucoside.

CONSTITUTION: The objective external drug for skin contains 0.00005-1% (in terms of dry component) of flavone glucoside and/or isoflavone glucoside of formula I (R₁-R₃) are H, OH or OCH₃; R₄ is Glucose, R₅ and R₆ are OH or OCH₃) or formula II (R₁ and R₂ are OCH₂O; R₃ and R₄ are H or, OH ; R₅ is O-Glucose or O-Glucose-Glucose ; R₆ is H or R₁, R₂, R₄-R₆ are H, OH or OCH₃ ; R₃ is O-Glucose). The above active compound may be a synthesized product or a natural extract. It can be used in the form of foundation, dispersion, ointment, etc., as well as solubilized system and emulsified system.
